

10W HIGH-VOLTAGE DC/DC CONVERTER

5Vdc to 240Vdc Output Range

Key Features

- Efficiency up to 84%
- Wide input voltage range (2:1)
(4:1 available upon request)
- Input-to-output isolation
- Soft start
- Hot pluggable
- Short circuit protection
- Thermal protection
- Adjustable outputs
- 50 μ A off state current

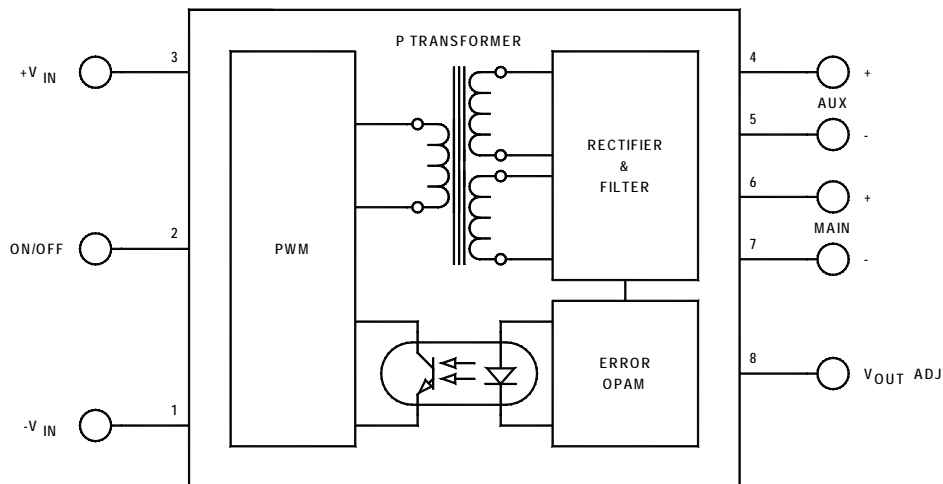

Beta Dyne is protected under various patents, including but not limited to U.S. Patent numbers: 5,777,519; 6,188,276; 6,262,901; 6,452,818; 6,473,3171.

Applications

- Telecom
- DSL Systems
- Remote Feed Systems
- Battery Power Systems

Functional Description

The 10W High-Voltage DC/DC Converter family is designed for telecommunication applications including xDSL remote power feed. The converters accept wide input voltage ranges with nominal inputs of 24, 48 and 120V_{IN}. Outputs can be single or dual and be set as two independent adjustable, isolated outputs from 5V_{OUT} to 120V_{OUT}. Additional features include total input-to-output isolation, short circuit protection, thermal protection, soft start, adjustable outputs, hot pluggability and efficiency up to 84%.

Startup Input Voltage		11	16		Vdc

* The RC input filter utilizes the R_{ON} of the series MOSFET transistor which is part of the hot pluggable circuit. The benefits of this RC filters are the reduction of inrush current by approximately 27dB and reflected ripple attenuation by 8dB. The penalty for the hot pluggability and the RC filter is 1% to 2% reduction of the converter's efficiency. See Figures 4 and 5.

* For dual isolated outputs, insert an **I** after the last digit (see Ordering Guide).

** The maximum input current at any given input range measured at minimum input voltage is given as $1.6 \cdot I_{NOMINAL}$. Nominal input current is the typical value measured at the input of the converter under full-load room temperature and nominal input voltage (24, 48 and 120Vdc).
