Functional Description

The EA60001 is an isolated 60W single output DC/DC converter that accepts $18V_{IN}$ to $36V_{IN}$ and provides $5V_{OUT}@12A$. Push-pull topology and output synchronous rectification allow for continuous operation even at low input voltages with maximum efficiency. Six-sided shielding with external synchronization minimizes EMI and RFI. Protection features allow the converters to operate in harsh environments.

EXTERNAL SYNCHRONIZATION

The converter can be synchronized to an external clock by driving the SYNC pin (pin 2) directly. The driving signal frequency must be 330kHz \pm 5% (200nS to 300nS negative going pulse (See Figure 4, Waveform 1)). When the external clock is AC-coupled to the SYNC pin of the converter through a ceramic capacitor, connect a signal

Schotky diode with the cathode connected to the SYNC pin and the anode to $-V_{IN}$ (See Figure 4). AC coupling reduces the power required for driving multiple converters and allows for continuous operation of the other synchronized converters in case the driving signal is missing or a short circuit develops at one of the sync inputs.
